

Full Lifecycle Management

Seamless Reporting

Unified Dashboard

SCALE YOUR LOGISTICS, NOT YOUR STRESS.

BASIC MASTERS

Basic Masters form the foundation of LogisticsERP by centralizing all core operational and administrative data required for day-to-day transport activities. This module ensures consistent data flow across transactions, billing, and reporting while supporting multi-branch and multi-warehouse operations.

- Driver and staff master for organized employee records.
- Route master for structured route and location mapping.
- Billing cycle and billing type configuration.
- Vehicle and vehicle group management.
- Item and packing-related masters.
- Support for multiple legal entities.
- Multiple branch setup.
- Warehouse master for stock and inward management.

CUSTOMER AND SUPPLY MASTER

Customer and Supply Master helps manage all business partners involved in logistics operations. It enables accurate tracking of customers, suppliers, transporters, and related entities, ensuring smooth coordination across consignments, billing, and payments.

- Customer and supplier master records
- Transporter and contractor management
- Broker master for intermediary handling
- Vehicle owner master for owned and hired vehicles

CONSIGNMENT NOTE (CAN) / LORRY RECEIPT (LR)

This module manages the complete consignment lifecycle from booking to delivery. It supports both full and part consignments with structured documentation, allowing accurate tracking through pickup, transport, inward, delivery, and POD stages.

- Lorry Receipt (LR) and challan generation
- Bilty creation for consignment documentation
- Pickup and delivery scheduling
- Consignment status tracking across stages
- Support for full and part consignment types
- Load type and delivery type configuration

RATE CONTRACTS

Rate Contracts allow businesses to define and manage customer-specific pricing structures. Rates can be configured based on routes, customers, and validity periods, ensuring accurate and consistent billing.

- Rate contract creation and management
- Customer-wise and route-wise pricing setup
- Automatic rate application during billing
- Validity period control and revisions

E-WAY BILL COMPLIANCE

The E-Way Bill module ensures GST compliance by managing E-Way Bill records linked to consignments and invoices. It simplifies monitoring and validity control for transported goods.

- E-Way Bill list management
- Validity extension handling
- Update and cancellation support
- Compliance-ready documentation

REPORTS AND MIS

Reports and MIS provide detailed operational and financial insights across logistics activities. These reports help management track performance, identify pending actions, and maintain transparency across transactions.

- Warehouse stock reports
- Ledger and financial reports
- Track consignment reports
- Bill submission reports
- Pending bill submission reports

BILLING & INVOICING

The Billing and Invoicing module streamlines financial operations by generating accurate bills directly from completed consignments. It supports structured billing cycles, tax calculations, bill submission, and payment tracking.

- Automated invoice generation
- Multiple billing and pricing models
- Tax and GST calculation
- Bill generation and submission tracking
- Incoming payment recording and reconciliation

BUILT FOR THE LOGISTICS INDUSTRY

LogisticsERP is developed specifically to support a wide range of transport and logistics operations. The system is structured to handle diverse consignment types, routing models, billing requirements, and reporting needs commonly used across the logistics industry. Its flexible masters, transaction workflows, and reporting modules allow businesses to manage daily operations efficiently while maintaining accuracy and compliance.

TRANSPORT AGENCIES

SEAMLESS TRANSPORT FLOW

1. PICKUP

Pickup entries are created against consignments to record collection details, pickup location, and scheduled movement for further transport processing.

Delivery records confirm the dispatch and delivery of consignments to customers. This stage ensures delivery status updates are properly maintained within the system.

4. DELIVERY

5. PROOF OF DELIVERY (POD)

Proof of Delivery (POD) captures delivery confirmation details. POD records help validate completed deliveries and support billing and reporting processes.

2. TRANSPORT

Transport records manage vehicle assignment and movement of consignments between branches or delivery locations in a structured manner.

Inward entries confirm receipt of consignments at warehouses or branches, ensuring accurate stock and movement tracking before delivery.

3. INWARD

Billing is generated after delivery confirmation, allowing accurate invoice creation, bill submission tracking, and incoming payment recording.

6. BILLING

WHY CHOOSE US?

01 PROOF OF DELIVERY (POD)

POD records are maintained to confirm successful delivery of consignments, supporting billing accuracy and reporting.

02 DELIVERY

Delivery entries record the final dispatch and completion status of consignments within the transport workflow.

03 CUSTOMIZE BILLING

Flexible billing configurations allow businesses to define billing cycles, billing types, and customer-specific billing rules.

04 PROMPT SUPPORT

Our support team assists with system usage, issue resolution, and smooth day-to-day ERP operations.

05 UNLIMITED USERS

The ERP supports multiple users across branches with role-based access and authorization control.

06 INSTANT BILLING

Bills can be generated promptly after delivery confirmation, helping reduce delays in billing and payment follow-up.

07 CUSTOMIZATION WELCOME

The ERP structure allows customization based on specific business processes and operational requirements.
